GUELPH-GUELPH/ERAMOSA WATER QUANTITY POLICY DEVELOPMENT STUDY

Draft Water Quantity Policy Approaches

Community Liaison Group
November 8, 2018
Meeting Purpose

• Present draft policy approaches for addressing significant water quantity threats
  ▪ Consumptive water taking
  ▪ Recharge reduction

• Receive feedback on draft policy approaches

COMMUNITY LIAISON GROUP

HELLO
My Name Is
POLICY DEVELOPMENT

Guelph-Guelph/Eramosa Water Quantity Policy Development Study

Technical Study
- Tier 3 Water Budget and Local Area Risk Assessment
  Provincial and municipal peer review, FYI for CLG

Technical Study
- Risk Management Measures Evaluation Process
  IMG input FYI for CLG

Discussion Paper
- Legislated Framework and Policy Options
  IMG input FYI for CLG

Policy Development
- Policy Approaches
- Draft Policies
  IMG and CLG input
Greatest impact
- Impact of water quantity threats on water level in municipal wells and whether they can still be pumped under existing, future, and drought conditions
- Evaluated using Tier 3 model

Threats ranking
- Water quantity threats are ranked based on relative impact to water levels at a municipal well

Best measures
- Threats ranking guides the selection of preliminary Risk Management Measures (RMMs)
- RMMs evaluated and recommended through scenarios using Tier 3 model
RMMEP RESULTS

Risk Management Measures Evaluation Process

Municipal Results:
• Majority of high ranked threats are municipal wells (Queensdale Well - #1, Arkell System - #2)
• Municipal wells are a threat to themselves
• BUT: Water quantity policies are to be designed to protect municipal wells

Non-Municipal Results:
• Individually, majority of non-municipal water taking has little influence on water levels in municipal wells except for Dolime Quarry
• Quarry dewatering (Dolime Quarry) ranked #3
THREATS MANAGEMENT STRATEGY

Recommended Risk Management Measures (RMMs)

- Municipal Water Supply Optimization
- Water Conservation and Efficiency
- Addition of New Municipal Water Supplies
- Maintaining Pre-development Groundwater Recharge Rates
- Mitigating Impacts from Non-municipal Consumptive Water Takings

Other recommendations:
- Tier 3 model maintenance
- Collective water resource management by municipalities, the conservation authority and the province to ensure municipal drinking water is sustainable and other water uses* (e.g., non-municipal takings, surface water flows, domestic users) have sufficient water to meet their respective needs

*protecting other water uses not an objective of the CWA unless it is a drinking water use
Discusses promising policy tools that could be used to protect water quantity sources.

- **Consumptive water taking:**
  - Prescribed Instrument* – Permit to Take Water (PTTW)
  - Part IV prohibition and Risk Management Plan (RMP)
  - Land use planning
  - Specify action
  * Other prescribed instruments, e.g., Aggregate Resources Act (ARA) approvals

- **Recharge reduction:**
  - Land use planning
  - Prescribed Instrument – Environmental Compliance Approvals (ECAs)
  - Education and outreach / incentives
POLICY DEVELOPMENT
Guelph-Guelph/Eramosa Water Quantity Policy Development Study

Technical Study
• Tier 3 Water Budget and Local Area Risk Assessment
  Provincial and municipal peer review, FYI for CLG

POLICY DEVELOPMENT

Process and Timeline

- **SPC CLG/IMG**: Jun 2018
- **CLG/IMG Nov 2018 SPC**: Dec 2018
- **SPC CLG/IMG Feb 2019**
- **SPC Apr 2019**

**Public Consultation**

- **Pre-consultation with Municipalities and Ministries**

**Water quantity policy approaches**

- **Draft Water quantity policies**

- **Revised Water quantity policies**

- **Acceptance and submission to MECP**

- **SPC Jun 2019**
POLICY APPLICABILITY

Wellhead Protection Area Quantity (WHPA-Q)

• Policies will apply within WHPA-Q (Guelph-Guelph/Eramosa
  Hamilton Drive)

• Policies do not apply outside WHPA-Q

• Policies to be incorporated into different municipal chapters
CLIMATE CHANGE ASSESSMENT

- Draft assessment of the potential impact of climate change as a threat to the quantity of municipal water supplies in Guelph-Guelph/Eramosa completed
- Work ongoing to finalize the assessment
- Draft assessment supports the current direction of policy approaches
- Details of the final assessment to be provided at a future CLG meeting
- No policies drafted for IPZ-Q yet
POLICY DEVELOPMENT

Context

• *Clean Water Act (2006)* protects source of municipal drinking water supplies through prevention, developing collaborative, watershed-based source protection plans

• Source protection plan policies protect current and future drinking water supplies from contamination (quality) and overuse (quantity) activities

• Policy objectives:
  ▪ Ensure activity never becomes significant drinking water threat
  ▪ Ensure activity ceases to be significant drinking water threat

• Policy approaches are high-level, draft, and subject to change. Additional approaches may be considered

• Approaches inform the development of detailed policy texts

• Policy texts will be more specific and may differ among municipalities
Policy Framework

Threats Management Strategy (TMS) and Policy Discussion Paper provide Risk Management Measures (RMMs) that inform water quantity policy development:

- Optimization of Municipal Water Supply Systems (Wells)
- Water Conservation and Efficiency
- Addition of New Municipal Supply
- Maintaining Aquifer Recharge Rates
- Mitigating Impacts from Non-municipal Consumptive Water Takings
- Regional Water Resource Management
- Other
POLICY FRAMEWORK

Risk Management Measures
- Optimization of Municipal System (Wells)
- Water Conservation & Efficiency
- Maintaining Aquifer Recharge Rates
- Addition of New Municipal Supply
- Mitigating Impacts from Non-municipal Consumptive Water Takings
- Regional Water Resource Management
- Other

Water Taking Policy Approach Themes
- Optimization
- Water Conservation and Efficiency
- Water Re-use
- Recharge Maintenance
- Growth and Development
- Demand Management
- Drought Management
- Long-term Dewatering
- Coordination
- Education & Outreach
- Monitoring
- Prioritization
- Funding

Recharge Reduction Policy Approach Themes
## Policy Approaches

### Water Taking

<table>
<thead>
<tr>
<th>Themes</th>
<th>Policy Approach</th>
</tr>
</thead>
<tbody>
<tr>
<td>Optimization</td>
<td>• Optimization programs for municipal water supply systems</td>

COMMUNITY LIAISON GROUP

Policy Approaches: Recharge Reduction

1. Are the policy approaches presented understandable?
2. Are the policy approaches on the right track?
3. Are there any specific gaps that need to be addressed?
NEXT STEPS

- **Risk Management Measures**
- **CLG/IMG Nov 2018**
  - SPC Dec 2018
- **Draft Water quantity policies**
- **SPC CLG/IMG Feb 2019**
- **Revised Water quantity policies**
- **SPC Apr 2019**
  - Public Consultation
- **Acceptance and submission to MECP**
  - **SPC Jun 2019**
- **Pre-consultation with Municipalities and Ministries**
• Lake Erie Region committed to collaborative process for policy development through municipal and stakeholder engagement with Project Team, IMG, and CLG
• Further discussion with ministry staff required for outstanding policy approaches
• CLG feedback on policy approaches due on November 22, 2018
• Policy framework and approaches to be revised and brought to the Lake Erie Region Source Protection Committee (SPC) on December 6, 2018
• Policy text to be drafted over the remainder of the fall and early winter and presented to the SPC on February 7, 2019
• Draft policy text presented to the CLG for feedback on February 13, 2019
• Revised policy text to be brought to the SPC on April 4, 2019
