

# GUELPH-GUELPH/ERAMOSA WATER QUANTITY POLICY DEVELOPMENT STUDY

**Draft Water Quantity Policy Approaches** 

Community Liaison Group November 8, 2018

### **Meeting Purpose**

- Present draft policy approaches for addressing significant water quantity threats
  - Consumptive water taking
  - Recharge reduction
- Receive feedback on draft policy approaches

Agenda

7:00 p.m.	Welcome, Agenda and Previous Meeting Review and Introductions
7:10 p.m.	Presentation – Water Taking Policy Approaches
7:40 p.m.	Discussion Session 1
8:15 p.m.	Presentation – Recharge Reduction Policy Approaches
8:25 p.m.	Discussion Session 2
8:50 p.m.	Next Steps and Closing Remarks
9:00 p.m.	Adjourn DRINKING WATER

# POLICY DEVELOPMENT

**Guelph-Guelph/Eramosa Water Quantity Policy Development Study** 

#### **Technical Study**

 Tier 3 Water Budget and Local Area Risk Assessment

Provincial and municipal peer review, FYI for CLG

#### **Technical Study**

 Risk Management Measures Evaluation Process

IMG input FYI for CLG

#### **Discussion Paper**

Legislated
 Framework and
 Policy Options

IMG input FYI for CLG

#### **Policy Development**

- Policy Approaches
- Draft Policies

IMG and CLG input

# RMMEP COMPONENTS

**Risk Management Measures Evaluation Process** 

### Greatest impact

- Impact of water quantity threats on water level in municipal wells and whether they can still be pumped under existing, future, and drought conditions
- Evaluated using Tier 3 model

### Threats ranking

 Water quantity threats are ranked based on relative impact to water levels at a municipal well

#### Best measures

- Threats ranking guides the selection of preliminary Risk Management Measures (RMMs)
- RMMs evaluated and recommended through scenarios using Tier 3 model

# RMMEP RESULTS

### **Risk Management Measures Evaluation Process**

### Municipal Results:

- Majority of high ranked threats are municipal wells (Queensdale Well #1, Arkell System - #2)
- Municipal wells are a threat to themselves
- BUT: Water quantity policies are to be designed to protect municipal wells

### Non-Municipal Results:

- Individually, majority of non-municipal water taking has little influence on water levels in municipal wells except for Dolime Quarry
- Quarry dewatering (Dolime Quarry) ranked #3

### THREATS MANAGEMENT STRATEGY

### Recommended Risk Management Measures (RMMs)

- Municipal Water Supply Optimization
- Water Conservation and Efficiency
- Addition of New Municipal Water Supplies
- Maintaining Pre-development Groundwater Recharge Rates
- Mitigating Impacts from Non-municipal Consumptive Water Takings

#### Other recommendations:

- Tier 3 model maintenance
- Collective water resource management by municipalities, the conservation authority and the province to ensure municipal drinking water is sustainable and other water uses\* (e.g., non-municipal takings, surface water flows, domestic users) have sufficient water to meet their respective needs

<sup>\*</sup>protecting other water uses not an objective of the CWA unless it is a drinking water use

### POLICY DISCUSSION PAPER

Discusses promising policy tools that could be used to protect water quantity sources.

- Consumptive water taking:
  - Prescribed Instrument\* Permit to Take Water (PTTW)
  - Part IV prohibition and Risk Management Plan (RMP)
  - Land use planning
  - Specify action
  - \* Other prescribed instruments, e.g., Aggregate Resources Act (ARA) approvals
- Recharge reduction:
  - Land use planning
  - Prescribed Instrument Environmental Compliance Approvals (ECAs)
  - Education and outreach / incentives

# POLICY DEVELOPMENT

**Guelph-Guelph/Eramosa Water Quantity Policy Development Study** 

#### **Technical Study**

 Tier 3 Water Budget and Local Area Risk Assessment

### **Policy Development**

- Policy Approaches
- Draft Policies

IMG and CLG input

# POLICY DEVELOPMENT

**Process and Timeline** 

SPC
CLG/IMG
Jun 2018

CLG/IMG Nov 2018 SPC Dec 2018 SPC CLG/IMG Feb 2019

SPC Apr 2019

Public Consultation

Risk Management Measures Water quantity policy approaches

Draft Water quantity policies

Revised Water quantity policies

Acceptance and submission to MECP

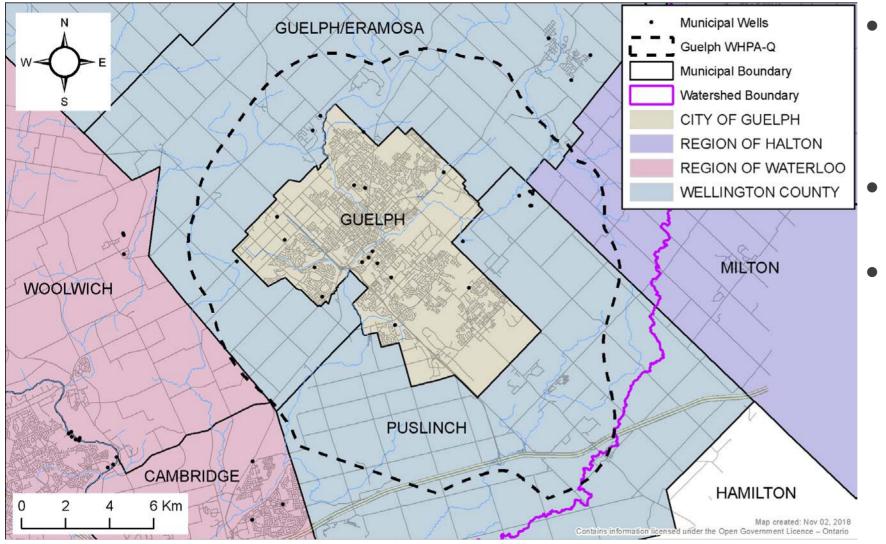

**Pre-consultation with Municipalities and Ministries** 

SPC Jun 2019

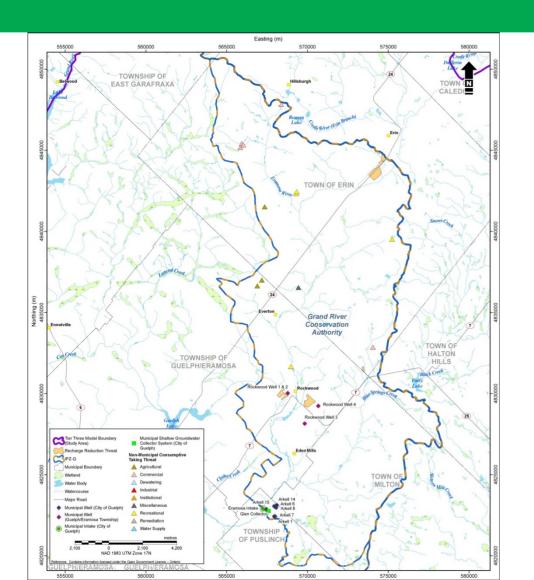

### POLICY APPLICABILITY

**Wellhead Protection Area Quantity (WHPA-Q)** 

- Policies will apply within WHPA-Q (Guelph-Guelph/Eramosa Hamilton Drive)
- Policies do <u>not</u> apply outside WHPA-Q
- Policies to be incorporated into different municipal chapters

### CLIMATE CHANGE ASSESSMENT

- Draft assessment of the potential impact of climate change as a threat to the quantity of municipal water supplies in Guelph-Guelph/Eramosa completed
- Work ongoing to finalize the assessment
- Draft assessment supports the current direction of policy approaches
- Details of the final assessment to be provided at a future CLG meeting
- No policies drafted for IPZ-Q yet

### POLICY DEVELOPMENT

#### **Context**

- Clean Water Act (2006) protects source of municipal drinking water supplies through prevention, developing collaborative, watershed-based source protection plans
- Source protection plan policies protect current and future drinking water supplies from contamination (quality) and overuse (quantity) activities
- Policy objectives:
  - Ensure activity never becomes significant drinking water threat
  - Ensure activity ceases to be significant drinking water threat
- Policy approaches are high-level, draft, and subject to change. Additional approaches may be considered
- Approaches inform the development of detailed policy texts
- Policy texts will be more specific and may differ among municipalities.

### POLICY FRAMEWORK

Threats Management Strategy (TMS) and Policy Discussion Paper provide Risk Management Measures (RMMs) that inform water quantity policy development:

Optimization of Municipal Water Supply Systems (Wells)

**Water Conservation and Efficiency** 

**Addition of New Municipal Supply** 

**Maintaining Aquifer Recharge Rates** 

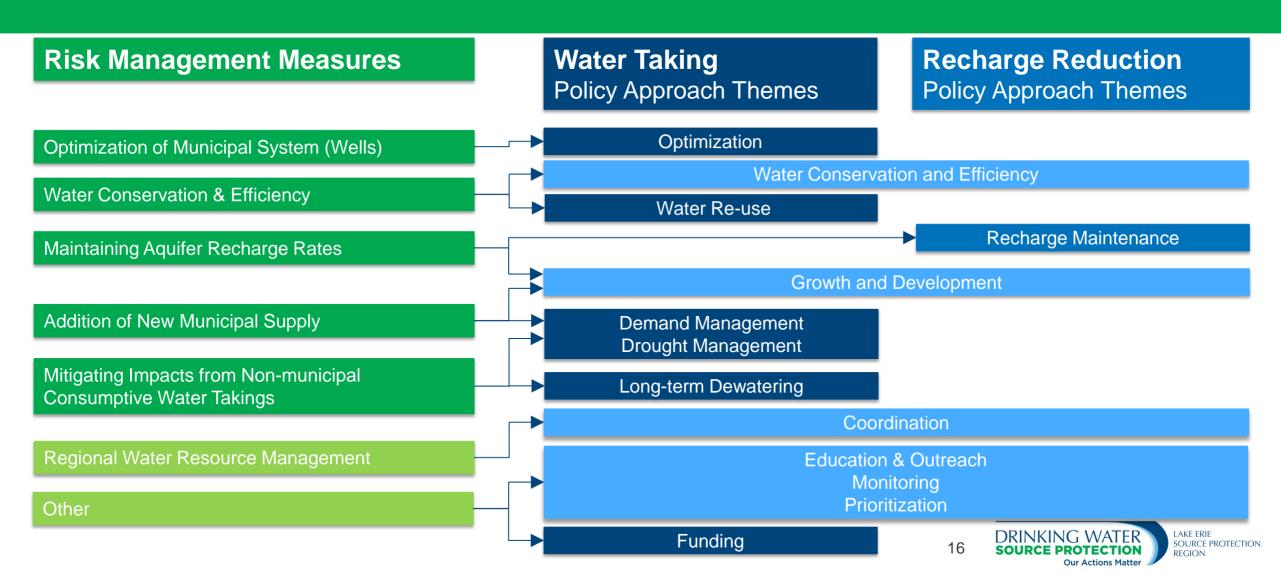

Mitigating Impacts from Non-municipal Consumptive Water Takings

**Regional Water Resource Management** 

**Other** 

### POLICY FRAMEWORK

# POLICY APPROACHES

**Water Taking** 

Water raking			
Themes	Policy Approach		
Optimization	Optimization programs for municipal water supply systems		
Water Conservation and Efficiency	Incentive programs for water conservation and efficiency		
Water Re-use	Guidelines for water re-use systems and technologies		
Growth and Development	<ul> <li>Growth targets under Places to Grow Plan</li> <li>Update of subwatershed studies</li> <li>Demand management for new drinking water supply sources</li> <li>Conditions as part of development approvals</li> <li>Water takings in areas of municipal servicing</li> </ul>		
Coordination	Water Resource Technical Working Group		
Demand Management	<ul><li>Permits To Take Water (PTTW) review</li><li>Water takings in areas of municipal servicing</li></ul>		

# POLICY APPROACHES

**Water Taking** 

Themes	Policy Approach
Drought Management	City of Guelph drought response plan
Education and Outreach	Education and outreach initiatives
Education and Outleach	<ul> <li>Web-based resources as part of EnviroGuide platform</li> </ul>
	Subwatershed monitoring program
Monitoring	<ul> <li>Collection of water usage data for water takers exempted from PTTW requirements</li> </ul>
Monitoring	<ul> <li>Long-term monitoring of shallow groundwater and surface water systems*</li> </ul>
	*under discussion
Drioritization	Prioritization of municipal water use
Prioritization	Prioritization of inspection and abatement

Tier 3 water budget model maintenance

Climate change assessment model

Long-term Dewatering

**Funding** 

Under discussion

**Policy Approaches: Water Taking** 

- 1. Are the policy approaches understandable?
- 2. Are the policy approaches on the right track?
- 3. Are there any specific gaps that need to be addressed?

# POLICY APPROACHES

**Recharge Reduction** 

Recharge Reduction			
Themes	Policy Approach		
Water Conservation and Efficiency	Incentive programs for recharge		
Recharge Maintenance	<ul> <li>Guidelines for groundwater recharge maintenance</li> <li>Groundwater recharge maintenance where appropriate</li> <li>Environmental Compliance Approval (ECA) review for stormwater management facilities with LID systems</li> </ul>		
Growth and Development	Update of subwatershed studies		
Coordination	Water Resource Technical Working Group		
Education and Outreach	<ul><li>Education and outreach initiatives</li><li>Web-based resources as part of EnviroGuide platform</li></ul>		
Monitoring	<ul> <li>Long-term monitoring program of shallow groundwater and surface water systems*</li> <li>*under discussion</li> </ul>		
Prioritization	<ul> <li>Prioritization of ECA review and inspection for stormwater management facilities with LID systems</li> </ul>		

**Policy Approaches: Recharge Reduction** 

- 1. Are the policy approaches presented understandable?
- 2. Are the policy approaches on the right track?
- 3. Are there any specific gaps that need to be addressed?

### NEXT STEPS

SPC CLG/IMG Jun 2018

CLG/IMG Nov 2018 SPC Dec 2018 SPC CLG/IMG Feb 2019

SPC Apr 2019

Public Consultation

Risk Management Measures Water quantity policy approaches

Draft Water quantity policies

Revised Water quantity policies

Acceptance and submission to MECP

**Pre-consultation with Municipalities and Ministries** 

SPC Jun 2019

### NEXT STEPS

- Lake Erie Region committed to collaborative process for policy development through municipal and stakeholder engagement with Project Team, IMG, and CLG
- Further discussion with ministry staff required for outstanding policy approaches
- CLG feedback on policy approaches due on November 22, 2018
- Policy framework and approaches to be revised and brought to the Lake Erie Region Source Protection Committee (SPC) on December 6, 2018
- Policy text to be drafted over the remainder of the fall and early winter and presented to the SPC on February 7, 2019
- Draft policy text presented to the CLG for feedback on February 13, 2019
- Revised policy text to be brought to the SPC on April 4, 2019
